

A sample paper with three figures

Kasten Sample and Dev Vault, 2026. Written for the Kasten dev vault.

Abstract

Notes are worth most when the figures they rest on can be found again. This short sample paper has three figures, two drawn with lines and one as a bitmap, so that a clip tool has something to cut out and cite.

1. A pipeline

Figure 1 shows the four steps from reading a paper to a cited slide.

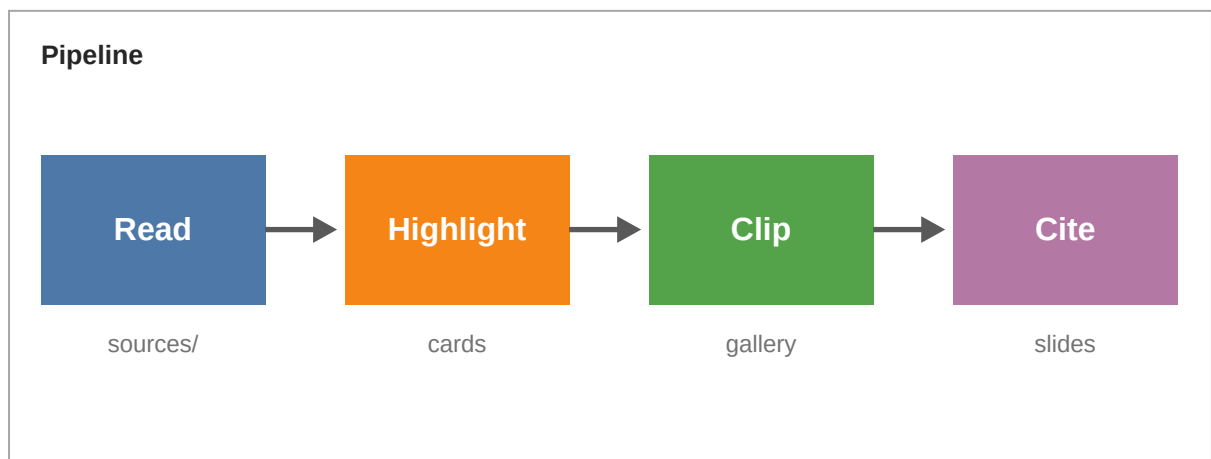

Figure 1. From reading to a cited slide.

Each step keeps a link to the one before it: a clip remembers its page and its rectangle, and a slide that shows the clip cites the paper it came from.

2. Results

Figure 2 compares five model sizes. Figure 3 shows where the model looked.

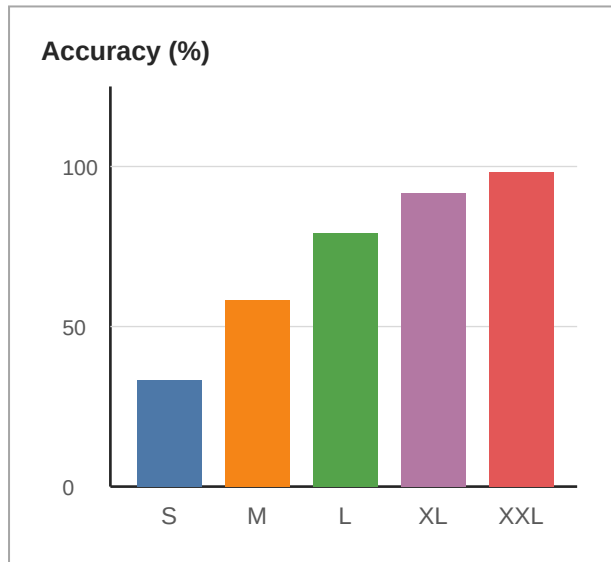

Figure 2. Accuracy by model size.

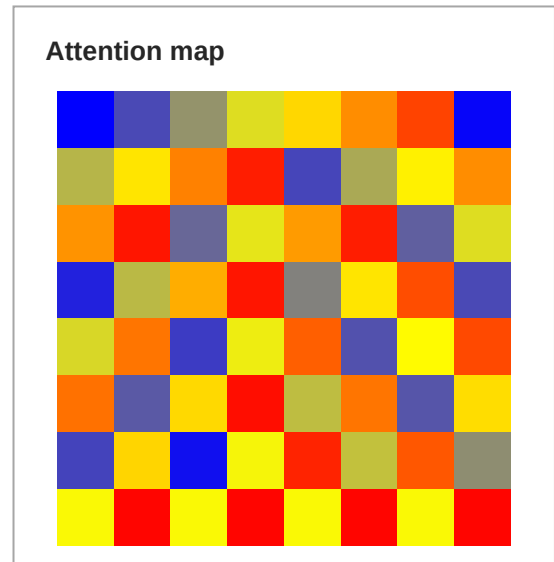

Figure 3. An attention map, as a bitmap.

Larger models are more accurate, and the gain flattens at the top. The map is coarse on purpose: each block stands for a group of words.
